Product: **IntelliSense**

Project : **Semantic Based Coder Assist**

Positive3 Incorporated was established in the year 2012 by the promoters Rishabh Jhunjhunwala, Nilesh Dungarwal, Nisarg Shah at Innovation & Entrepreneurship Development Centre, Sardar Patel Institute Of Technology, Andheri(West), Mumbai.

Our product is Intellisense which is a multi-platform application that is used to solve all coding related issues usually faced by coders. This application fetches information from various trusted sources and then ranks them using a ranking algorithm based on a number of factors and displays them for the user.

The application aims at removing the dependence on physical experts by providing a virtual expert which uses all the archives and provides answers based on analyzing the questions posted by the users. Also it saves a lot of time as the user does not has to depend on bloggers to find time to answer to their question as previous archives dealing with the same or similar questions can be used to solve the query. The motto of the company is to provide a better query redressal mechanism for all the new coders.

This project was fully funded by Department of Science and Technology, Government of India, New Delhi.
